SEQ ID NO 6

LENGTH: 87

TYPE: DNA

CORGANISM: Homo sapiens

FEATURE:

NAME/KEY: exon

LOCATION: (1)..(87)

OTHER INFORMATION: Exon I
US-09-104-340-6
                                                                                                                                   Sequence 6, Application US/09104340

GENERAL INFORMATION:
APPLICANT: BOYD, Andrew W
APPLICANT: BOYD, Andrew W
APPLICANT: LACKMANN, MAITIN
TITLE OF INVENTION: RECEPTOR-LIGAND SYSTEM AND ASSAY
FILE REFERENCE: boydug
CURRENT APPLICATION NUMBER: US/09/104,340
CURRENT APPLICATION NUMBER: P07549
EARLIER APPLICATION NUMBER: P07549
EARLIER FILING DATE: 1997-06-25
NUMBER OF SEG ID NOS: 25
NUMBER OF SEG ID NOS: 25
SOFTWARE: Patentin Ver. 2.0

US-60-185-359-1293 Application US/60185359

Sequence 1293, Application US/60185359

GENERAL INFORMATION:

APPLICANT: Venter, J. Craig

ITILE OF INVENTION: The Drosophila Genome, Primary Nucleic

TITLE OF INVENTION: Acid Sequences, Systems Containing The Nucleic Acid

ITILE OF INVENTION: Sequences and Uses Thereof

FILE REFERENCE: CL000284

CURRENT APPLICATION NUMBER: US/60/185,359

CURRENT FILING DATE: 2000-02-28

NUMBER OF SEQ ID NOS: 2926

SEQ ID NO 1293

SEQ ID NO 1293

LENGTH: 263456
; TYPE: DNA
; ORGANISM: Drosophila

                                          This sequence encodes human eph/elk-like kinase (HEK). HEK is expressed in both pre-B cells and T cell lines and in a number of tumours of human origin, eg. lymphoid tumours LK63, Lila-1 and JM, and the epithelial tumour HeLa. This receptor-type thymidine kinase (TK) and/or its ligands are useful as agents in modulation of the production and/or function of pre-B, B and T cells. The TK and its analogues have activity in transducing signals or in stimulating cellular responses such as growth and/or differentiation.

PT plants, improves resistance to acidic growth conditions
PS Claim 1; Page 6-7; 9pp; Japanese.
CC This sequence represents a plant ferritin gene. The plant ferritin
CC gene, whose production is induced in acidic soil, is involved in the
CC coccurrence of disorders in a plant caused by acidic soil as well as
CC in improvements in the resistance of a plant to acidic conditions.
CC This gene can be used for breeding of plants highly resistant to acidic
CC soil. The cDNA or its fragment can also be used for diagnosis of a
CC plant planted in acidic soil by determining the expression of ferritin
CC in it. Ferritin can be expressed excessively by introducing the cDNA
CC of the invention into a plant in the sense direction to reinforce the
CC resistance of the plant to acidic soil. Therefore acidic soil which could
CC not be utilised for agricultural purposes can be utilised by the

                                                                                                                                                                                                                                                                                                                                                                                                                        Newly identified calcium channel sub:units alpha II and alpha IH

for development of cell lines which express the novel calcium

reproper channels, useful for screening channel (ant)agonists

Claim 2; Pages 26-33; 45pp; English.

This represents a cDNA from BAC bk206c7 encoding a partial sequence of a

chuman calcium channel subunit alpha-1. The invention provides isolated

chuman calcium channel subunit alpha-1. The invention provides isolated

chuman calcium channel subunit alpha-1 and

claim 1: An eukaryotic cell transiently or stably transformed with an

claim 2: Expression vector containing the calcium subunits encoding DNA fragments

can be used for expressing the calcium channel. The cells are optionally

further transformed to express alpha 2 delta or beta calcium channel or

compounds capable of acting as agonists or antagonists for the alpha-II

calcium channel. The nucleic acid sequences can be used in histological

assay to determine the tissue distribution of the novel calcium channel
                                                                                                                                                                                                                                                                                                                                          Query Match

Q95110 encodes R78318 human thyroid hormone receptor alpha-1 (hT alpha-1). The nucleic acid can be used to develop prods. for use analysis assays and therapeutic agents. hTR-alpha-1 can be used tests for thyroid function, or for producing antibodies for use affinity purificn., detection and quantification.

                                                                                                        Human long chain DNA and antibodies which bind to the peptide(s) - is potentially useful in treating nervous disorders Claim 4; Page 92-93; 109pp; Japanese.

The present sequence represents human derived long chain DNA comprising at least a peptide-encoding region. Peptides encoded by the human derived long chain DNA, may be used for detecting substances which bind to the peptides, and for detecting substances which suppress or inhibit binding to these peptides. The peptides and their inhibitors are potentially useful in treating nervous disorders.

                                                                      Problement the control of the process of the sequence is that encoding the human bone morphogenetic protein CC BMP-8. It may be used in the product of a recombinant heterodimeric CC protein having bone stimulating activity. This heterodimer is CC encoded by a sequence encoding BMP-2 or BMP-4 or a fragment and a CC sequence encoding a second protein or fragment, BMP-8. It may be CC used in compsns. for wound healing, tissue repair, and in similar CC compsns. which have been indicated for the use of individual BMPs. CC Increased potency of the heterodimer over individual BMPs may permit CC induces cartilage and/or bone growth in circumstances where bone CC induces cartilage and/or bone growth in circumstances where bone CC fractures and cartilage defects in humans and other animals. The CC contributes to the repair of congenital, trauma induced or oncologic cresection induced craniofacial defects, and also is useful in cosmetic plastic surgery. It may be used in the treatment of periodontal CC disease and in other tooth repair processes. It may also be useful in the transplantation and treatment of conditions exhibiting a decrease in neuronal survival and be useful in the transplantation and treatment of conditions exhibiting a decrease in neuronal survival. It may be useful in the transplantation and treatment CC combined with other agents beneficial to the bone and/or cartilage defect, wound or tissue in question, e.g. EGF, PDGEF, TGF-alpha, CC TGF-beta and insulin-like growth factor

Mature hOP2 is one of the preferred known morphogens which can be used in the manufacture of pharmaceuticals for inducing non-chondrogenic mammalian tissue growth, progenitor cell proliferation and hepatic tissue growth and for maintaining the phenotypic expression of differentiated cells in a mammal. Morphogenic compositions of the invention can also be used to treat blood disorders and impaired or lost immune function. Morphogens sharing at least 70% homology with hOP2 are included.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  osteopenia or osteoporosis, postmenopausal or senile osteoporosis, hyperparathyroidism and Paget's disease. The methods can be used for hyperparathyroidism at risk for loss of bone mass such as postmenopausal females, aged individuals and individuals undergoing dialysis. The loss of bone mass may result from an imbalance in bone resorption or bone formation, an imbalance of calcium or phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence is that encoding human osteogenic protein 2 (hOP-2) a morphogenically active protein which may be used as part of a method for treating a bone fracture and a disease which causes or results in bone fractures or other defects in skeletal microstructure. Such diseases include chronic renal failure and other kidney diseases, osteomalacia, vitamin D deficiency-induced

PT of a morphogen - by assaying test tissue type cells for parameter indicative of a prodn. Level change of morphogen

PT indicative of a prodn. Level change of morphogen

PS Disclosure; Page 95-97; 132pp; English.

CC This sequence encodes the human morphogen hop2, isolated from the CC hippocampus. This morphogen is inactive when reduced but is active CC as an oxidised homodimer and when oxidised in combination with other CC morphogens. These morphogens are capable of stimulating proliferation CC of progenitor cell, stimulating the differentiation of progenitor cells, stimulating the proliferation of differentiated cells and CC supporting the growth and maintenance of differentiated cells, These morphogens may also be capable of inducing redifferentiation of CC committed cells under appropriate environmental conditions.

Claim 26; Page 119-121; 165pp; English.
Human osteogenic protein (OP)-2 is a preferred morphogen for use in treating tissue damage in e.g. inflammatory disease, autoimmune disease, arthritis, psoriasis, dermatitis, diabetes and emphysema.

Proteins having at least 70% homology with OP-2 amino acid sequences can also be used. See R33400 for mature hOP-2.

New pure mammalian osteogenic proteins - induce cartilage and endochondral bone formation when in association with a matrix Claim 26; Columns 143-148; 128pp; English.

The osteogenic protein when in association with a matrix can induce at the locus of an implant the full development cascade of endochondral bone formation including vascularisation, mineralisation and bone marrow differentiation. The osteogenic protein can also be used to repair both bone and cartilage in the treatment of osteoarthritis. This sequence encodes the pre-proform of the protein.
